

CABLE TIES

Cable ties

Material	Polyamide PA-6.6
Colour	Black or white
Working temperature	-25° & -40° up to +85° C
Tightening temperature	-10° up to +60° C
Melting point	+ 260°
Fammability rating	V2 acc- a UL 94
Resistance to chemical products	High resistance to bases, oils, greases, oil derivatives. Limited resistance to acids. Not resistant to phenols and to chloride solvents

Natural cable ties (white colour) of LeghornGroup have low resistance to UV radiation and therefore are not suggested for outdoor applications.

Black cable ties of LeghornGroup are additivated with carbon black. They have improved weather and UV radiation resistance and are more suitable for outdoor applications ISO 4892 (1.000 h)

How to choose the appropriate cable tie

To choose the appropriate cable tie for your requirements, we suggest to evaluate the following specifications:

- a. Material: taking into consideration its application, good resistance to weather and ultraviolet rays in lower-temperature environments.
- b. Tensile strength.
- c. Bundle diameter (min. and max.)
- d. The flammability rating.
- e. Shape, in accordance to its application.

How to choose the appropriate cable tie

Chemical agents such as dusts, liquids and gases can damage cable tie's material. In fact, if cable ties come into contact with several compounds, its physical and mechanical properties may be altered. In this case, the performance of the product may not reach the standard declared values.

Special cable ties - good resistance to weather and ultraviolet rays in lower-temperature environments.

All polymers including the polyamides used for the production of cable ties are sensitive to UV radiation. The most common additive used for protecting polyamides from UV radiation is carbon powder commonly known as "carbon black".

Cable tie

By LeghornGroup

Natural cable ties have low resistance to UV radiation and therefore are not suggested for outdoor applications.

Black cable ties are additivated with carbon black. They have improved weather and UV radiation resistance and are more suitable for outdoor applications, comparing to the natural one.

Tests performed in laboratories give for black cable ties a resistance till 150 hours QUV-B radiation following ISO 4892 norm. This can be compared to ca. 3 years outdoor resistance on average exposure to South-European areas.

Temperature resistance

All polymers including also polyamides used for the production of cable ties are sensitive to low temperatures; application of polyamide 6.6 cable ties is possible till around -10°C . Standard polyamide becomes very brittle at temperatures below -40°C (min suggested service temperature for continuous use).

In case of lower temperatures, cable ties become really brittle.

Tensile strenght

LeghornGroup' cable ties are tested following the main international standards CEI EN 62275.

The standard testing conditions are 23° C and 50% of relative humidity.

It is important to underline that the values arising from those laboratory tests are indicatives and they refer to the above-mentioned conditions.

Field of action of LeghornGroup

PROTECTION: We can protect your goods and assets with security seals and various products for tamper protection. The company can create bespoke, technical solutions to meet client's requirements.

CONTROL: We ensure goods and people can be monitored using security products and integrated complete hardware and software solutions that allow the operator to monitor and intervene in real time, even remotely.

IDENTIFICATION: LeghornGroup's understanding of authentication along with their innovative technical products and solutions allow users to uniquely and securely identify, goods, vehicles, containers, animals and people.

TRACKING: LeghornGroup's real time GPS tracking devices allow users to monitor location, status and movements of vehicles and people.

RFID SOLUTIONS: LeghornGroup also manufactures solutions for product authenticity; automatic identification systems using RFID to aid traceability of objects, animals and people, offering new and efficient operations to speed up the supply chain.
